

Maanandamayji Memorial 12th Grade

Hello friend,

My name is Narendra. I was born in Nepal in 1997. I was brought to Ramana's Garden by my father because of the fighting going on there between the army and the Maoist. My one of the relative told my father about Ramana's Garden so my father brought me here. When I was brought here I was very nervous and scared, but soon I got to know Prabha Ji and everyone and then I feel happy. Prabha Ji is the one who is running the orphanage. She was very kind to me and my father. My father left me in Ramana's Garden and went away to work.

I got many new friends here and it became my new home. I get everything I need including a very good opportunity to study and make my dreams comes true. I want to do graphic design in New York. I am very interested in design and animation.

I feel Ramana's Garden is my real home. It is much better than my real home. Ramana's is very important for me because if I stay here and study hard I would go to New York and fulfill my aim. In Ramana's I can study as much as I want here. I am not disturbed at all. Here I am getting all the facilities which I had never thought before even in my dreams like computer room, library, dance classes, art, theatre, yoga, and meditation. I also get the best food, clothing and a place to live. Ramana's Garden means everything to me. It is my life. Ramana's Garden has changed my whole life. I am incomplete without the help of Ramana's Garden.

After I graduate I want to do a graphics design course in New York. I want to do the three years course. I want to learn animation, web designing, and graphic design. I also want to help the society through art, animations and designing. I would like to teach children especially the poor ones who really wants to know how to do design and are very interested in it but are not able to learn because of their poverty and other problems. I feel that help and love is needed everywhere and one day I would like to fulfill the needs and wants of as many people as I can.

Thank you!
